MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

9 9 1 Thu Sep 2 11:22:32 1999; MasPar time 1.38 Seconds 88.032 Million cell updates/sec

bular output not generated.

Description: Perfect Score: Sequence: >US-08-599-226-4 (1-12) from USOB599226.pep 66 1 VSYLSTASSLDX 12

Scoring table: PAM 150 Gap 15

106580 seqs, 10152877 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-issued 1:5A\_COMB 2:5B\_COMB 3:PCT9\_COMB 4:backfiles1

Statistics: Mean 15.730; Variance 46.168; scale 0.341

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                          lpha-acetylated.";
EBS LETT. 263:373-375(1990).

I- FUNCTION: THE PROTEASOME IS A MULTICATALYTIC PROTEINASE COMPLEX WHICH IS CHARACTERIZED BY ITS ABILITY TO CLEAVE PEPTIDES WITH ARG, PHE, TYR, LEU, AND GLU ADJACENT TO THE LEAVING GROUP AT NEUTRAL OR SLIGHTLY BASIC PH. THE PROTEASOME HAS AN ATP-DEPENDED
PROTEOLYTIC ACTIVITY.

PATHWAY: IS INVOLVED IN AN ATP/UBIQUITIN-DEPENDENT NON-LYSOSOMAL PATHWAY:

PROTEOLYTIC PATHWAY.

SUBUNIT: THE PROTEASOME IS COMPOSED OF AT LEAST 15 NON IDENTICAL SUBUNITS WHICH FORM A HIGHLY ORDERED RING-SHAPED STRUCTURE.

SUBCELLULAR LOCATION: PROTEASOMES ARE FOUND IN THE CYTOPLASM AND ALSO IN THE NUCLEUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    QRYNRAPY

PROTEDLYTIC PATHWAY: IS INVOLVED IN AN ATP/UBIQUITIN-DEPENDENT NON-LYSOSOMAL PROTEDLYTIC PATHWAY:
SUBUNIT: THE PROTEASOME IS COMPOSED OF AT LEAST 15 NON IDENTICAL SUBUNITS WHICH FORM A HIGHLY ORDERED RING-SHAPED STRUCTURE.
SUBCELLULAR LOCATION: PROTEASOMES ARE FOUND IN THE CYTOPLASM AND ALSO IN THE NUCLEUS.
ALTERNATIVE PRODUCTS: TWO FORMS (SHORT AND LONG) ARE PRODUCED BY ALTERNATIVE SPLICING OF THE GENE FOR THIS PROTEIN.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY TIA; ALSO KNOWN AS THE PROTEASOME A-TYPE FAMILY. BELONGS TO THE C2 SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QRYNRAPY
                                                                                                                                                                                                                                                               LOWY D.D.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               H IS CHARACTERIZED BY ITS ABILITY TO CLEAVE PEPTIDES WITH PHE, TYR, LEU, AND GLU ADJACENT TO THE LEAVING GROUP AT RAL OR SLIGHTLY BASIC PH. THE PROTEASOME HAS AN ATP-DEPENDENCE.
                                                                                                                                                                                                                                                                                       93010996.

"ASSOCIATION OF 19A-FC receptors (Fc alpha R) with Fc epsilon RI
gamma 2 subunits in U937 cells. Aggregation induces the tyrosine
gamma 2.";
J. IMMUNOL. 153:3228-3236(1994).

-1- FUNCTION: BINDS TO THE FC REGION OF IMMUNOGLOBULINS ALPHA.
MEDIATES SEVERAL FUNCTIONS INCLUDING CYTOKINE PRODUCTION.
-1- SUBUNIT: ASSOCIATES WITH THE FC EPSILON RI GAMMA 2 RECEPTOR
INDUCING TYROSINE PHOSPHORYLATION OF GAMMA 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE FROM N.A. CELL. BIOL. 14:3459-3468(1994).

-!- FUNCTION: REGULATES THE GDP/GTP EXCHANGE REACTION OF PROTEINS BY INHIBITING THE DISSOCIATION OF GDP FROM T SUBSEQUENT BINDING OF GTP TO THEM.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-!- TISSUE SPECIFICITY: HIGH EXPRESSION IN BRAIN, LOWER I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SHISHEVA A., SUDHOF T.C., CZECH M.P.;
"Cloning, characterization, and expression of a nove dissociation inhibitor isoform from skeletal muscle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MUS (MOUSE).

-!- FUNCTION: REGULATES THE GDP/GTP EXCHANGE REACTION OF MOST PROTEINS BY INHIBITING THE DISSOCIATION OF GDP FROM THEM, SUBSEQUENT BINDING OF GTP TO THEM.

-!- TISSUE SPECIFICITY: UBIQUITOUSLY EXPRESSED.
                                                                                                                                                                                      J. BIOL.

BIOL. 14:3459-3468(1994).
FUNCTION: REGULATES THE GDP/GTP EXCHANGE REACTION OF MOST PROTEINS BY INHIBITING THE DISSOCIATION OF GDP FROM THEM, SUBSEQUENT BINDING OF GTP TO THEM.
SUBCELLULAR LOCATION: CYTOPLASMIC AND MEMBRANE-ASSOCIATED.
TISSUE SPECIFICITY: UBIQUITOUSLY EXPRESSED.
SIMILARITY: BELONGS TO THE TCD/MRS6 FAMILY OF GDP DISSOCIATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1290 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple	High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer Claim 20; Page 72; 102pp; English. The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) light chain complementarity determining region 3 (CDR3).	10-FEB-1997; U02219. :	; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ;	UT 1 W27585 standard: poptide: 9 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            88888888888
                                                                                                WPT: 97-415302/38.

High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer PS Claim 9: Page 64: 102pp; English.

CT The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) light chain complementarity determining region 3 (CDR3).

CC factor alpha (TNF-alpha) antibody (Ab) light chain complementarity determining region 3 (CDR3).

CC less and has a Koff rate constant of 1x10 power -8 M or class and has a Koff rate constant of 1x10 power -3 s power -1 or class and has a Koff rate constant of 1x10 power -3 s power -1 or class and has a Koff rate constant of 1x10 power -3 s power -1 or class and has a Koff rate constant of 1x10 power -3 s power -1 or class and has a Koff rate constant of 1x10 power -3 s power -1 or class and has a Koff rate constant of 1x10 power -3 s power -1 or class and has a Koff rate constant of 1x10 power -7 M or less. The Ab, which constitution activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid csclutists or nephrotic csclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic csclerosis, autoimmune diabetes, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, calcoholic, viral or fulminant hepatitis, coagulation toxicity. The characteristic or inflammatory bone disorders, bone resorption disease, constant or purchasion, scar tissue formation, scar tissue formation, constant or subjective adherence of this inflammatory bone disorders, bone modifical call constant or subjective adherence of this inflammatory bone disorders of this is the subject of this is the s

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                             FIT High affinity antibodies against human TNF alpha - useful to inhibit PT High affinity antibodies against human TNF alpha - useful to inhibit PT NF alpha activity, e.g. to treat autoimmune diseases and cancer S Claim 15; Page 75; 102pp; English.

CT The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) light chain variable region. The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1292 assay with an IC50 of 1x10 power -7 M or less The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrevaia, periodonnal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cells (HTVFC)
                                                                                                                                                     Query Match
